

CHASING

The motto of Chasing Innovation Tech Company is

“EXPLORE THE UNEXPLORED”

and that is exactly what its world leading range of underwater equipment has been developed to achieve.

Chasing was founded in 2016 and is headquartered in Shenzhen, China. In the UK Chasing's distributor is **ALPHAGEO**.

Chasing's range of products, now in their seventh generation, are widely used in underwater observation and photography, scientific research and exploration – and of course aquaculture.

In aquaculture, fish farm owners need to be able to conduct underwater inspections of damaged or fouled nets, water quality and the health and growth of their stock. These procedures face a number of operational challenges and manual inspection is a costly and potentially risky exercise.

M2 Pro Max

Chasing
M2 Pro

Chasing's subsea ROVs are helping fish farmers deal with the challenges of the marine environment.

Chasing offers a range of remotely operated vehicles (ROVs) depending on the specification required.

The Chasing M2 Pro and Pro Max have eight thrusters, allowing movement in any direction, and can carry out high-definition recording with a 4K lens.

They have a removable 300Wh standard battery for longer endurance, which can be upgraded to a 700Wh battery, and have the capacity for mounting multiple accessories.

The Chasing M2 Pro and Pro Max also have high-powered motors with anti-flow capability, a built-in docking station (*M2 Pro Max*) and external floodlights for greater image clarity.

Optional accessories include a grabber arm, E-reel, camera, DLS and equipment for water sampling and monitoring.
